Short Description

Has man really been to the moon? It's been 50 years, and the debate rages on. For the first time, a film compiles in a single piece of work, all the best evidence in favor of the moon landings and the evidence contrary to them. For the first time we can also analyze the Apollo pictures in detail, with the aid of some among the top photographers in the world. What was the Apollo project really? The biggest achievement in the history of mankind, or the biggest fakery of all times, watched on live television by more than half a billion people?
